APPENDIX N

SHUTTLE CAR CONVEYOR MOTOR

Typical nameplate data for the conveyor motor of a Shuttle car can be seen in Table N-1. The conveyor motor measured at both sections was a 9.5 / 19 kW two speed induction motor. The motor is normally connected to the fast speed which is the mean that the motor is rated to consume 15 A at full load.

N.1 LOAD PROFILE

The next section focuses on the load profiles of the conveyor motor. Each graph shows the line voltage and the voltage limits, the load current and full load current capacity of the conveyor motor. The morning shifts and afternoon shifts are separated as well as the measurements made at the different sections.

N.1.1 SECTION 50

N.1.1.1 Morning shifts

Figure N.1-1: Load current and voltage for a conveyor motor – 04 July 2005.
Figure N.1-2: Load current and voltage for a conveyor motor
– 04 July 2005 (30 minute period).
N.1.1.2 Afternoon shifts

Figure N.1-3: Load current and voltage for a conveyor motor – 04 July 2005.
Figure N.1-4: Load current and voltage for a conveyor motor  
– 04 July 2005 (30 minute period).
N.1.2 SECTION 51

N.1.2.1 Morning shifts

Figure N.1-5: Load current and voltage for a conveyor motor – 20 June 2005.
Figure N.1-6: Load current and voltage for a conveyor motor – 20 June 2005 (30 minute period).

Figure N.1-7: Load current and voltage for a conveyor motor – 21 June 2005.
Figure N.1-8: Load current and voltage for a conveyor motor
– 21 June 2005 (30 minute period).
N.1.2.2 Afternoon shifts

Figure N.1-9: Load current and voltage for a conveyor motor – 20 June 2005.
Figure N.1-10: Load current and voltage for a conveyor motor – 20 June 2005 (30 minute period).

Figure N.1-11: Load current and voltage for a conveyor motor – 21 June 2005.
Figure N.1-12: Load current and voltage for a conveyor motor
– 21 June 2005 (30 minute period).
N.2 HISTOGRAM

The next section focuses on the frequency with which a Shuttle cars conveyor motor consumed a certain load power and current. The graphs show the number of times a certain power or current has been consumed. The tables give data about the tonnes produced during the shift and the percentage time of the shift that the motors were producing. The time that the motors have been over loaded or loaded within the full load rating of the motor is given as a percentage of the actual producing time. The morning shifts and afternoon shifts are separated as well as the measurements made at the different sections.

N.3 THERMAL CAPACITY

The next section focuses on the temperature of the windings of the conveyor motor. Each graph shows the temperature of the motor, the load current and rated full load current of the motor. The morning shifts and afternoon shifts are separated as well as the measurements made at the different sections. The thermal time constant is 30 minutes.
